

## ASSEMBLING INSTRUCTIONS

Because there are so many different chairs it might be possible that your chair is somewhat different from the chair on the picture. (for example: upholstered seat instead of polyurethane seat.) There are no differences in the way you have to mount the chair.

1. Mount the back to the seat. (if you have a chair with a bended footrest mount the footrest on the frontside of the seatplate with the fixing material.)
2. Put the base on a flat surface.
3. Put the gaslift or threadedge into the base.
4. If you have a footring mount it on the gaslift or threadedge. Put the seat and back on top of the gaslift and push it downwards.
5. Take hold of the seat and lift the chair appr. 10 cm. Put the chair on the floor with some force. All connections are fixed now; your chair is ready for use.
